მოსალოდნელი შედეგები:

- > Sustainable environment for the development of e-services is created.
- > Key state registers interact with each other and provide the automated information exchange (interoperability) needed for e-services provision.
- > Trust in governmental e-services increased through the creation of a secure infrastructure: ecosystem for digital identification, secure data exchange, data quality in key state registers, etc.
- > Key stakeholders developed the necessary capacities to effectively steer and coordinate the design and implementation of the e-governance policy.
- > The civil and private sector is well informed about the opportunities and risks of e-governance.
- > The government institutions have an improved capacity to tackle cyber threats and implement data protection principles.
